SOFTWARE DEVELOPMENT FIRM

Application Factory, Inc. is a software development firm providing custom and packaged solutions to the petrochemical companies of the Fortune 500. We have developed many systems that introduce standards, control, and efficiency into field operations.

Although we started when punch cards and CRTs were still in use, our evolution has matched the pace of technology. As our society becomes more and more untethered from traditional information systems architecture, it is only natural that business embraces mobile connectivity and the varied solutions that this exciting new platform makes possible. At Application Factory, we specialize in delivering high-end private GIS that deliver sub-centimeter precision with the user friendliness of Google Earth. Contact us today for more information.

INFORMATION SYSTEMS

We understand the need for high performance and mission critical availability of these systems so that tasks can be completed, taking less time and less people.

» MORE

MULTI-PLATFORM

A corporate network architecture that includes web-based, windows mobile compatibility and WiFi capabilities gives users higher availability.

» MORE

MOBILE IDENTITY

We design many mobile applications with network autonomy in mind, so systems continue to function with poor connectivity or even without WiFi available at all.

» MORE

GIS MAP

Our GIS implementations are powerful, database-driven systems with a web interface making them available anywhere in the world for remote or field personnel to access.

CLOUD 9 BUSINESS-CLASS BASED SERVER HOSTING CLOUD9

Despite the hype about this mysterious technology, Application Factory is delivering true Cloud-based server hosting. In our business-class offering, cloud technology is not a backup for grandmother's photos. Instead the "Cloud" is your server that now exists in an absolutely disaster proof environment where hardware failures no longer threaten the security and integrity of your data.
